D·FAST

D-FAST® WEB ACCESS MODULE

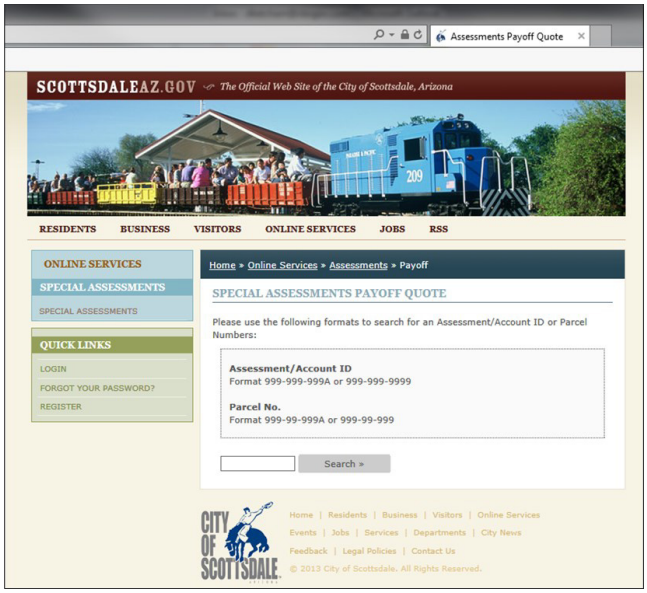
An Overview of the Web Access Module

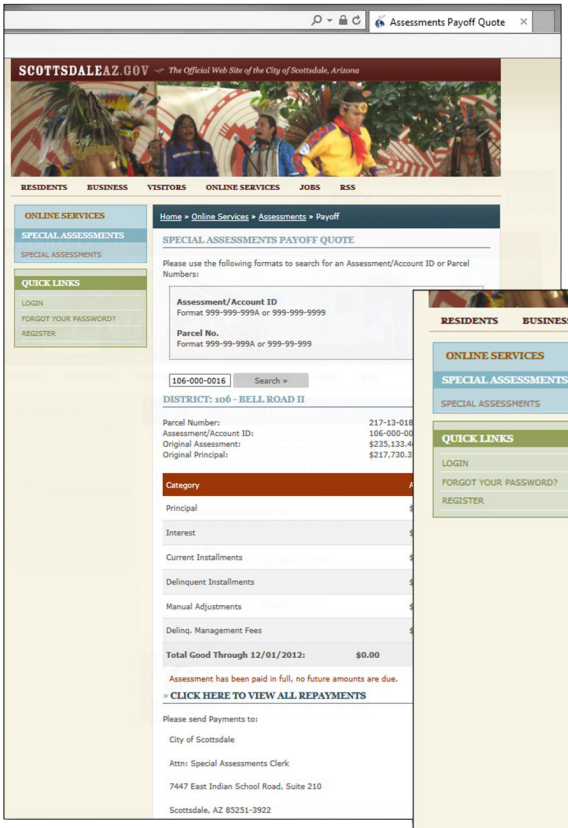
The D-FAST Web Access Module is a separately licensed add-on module to D-FAST enabling agencies to quickly create a web portal.

This web portal is for property owners and other interested parties to access repayment schedules, payoff quotes and other property-related information directly from an agency's website. The D-FAST Web Access Module comes with standard ASPX web pages provided by NBS for the search interface, search results, and display of the various data including Property & Account information, transaction history, repayment schedules, and payoff quotes. The agency modifies and/or adds to this basic ASPX code to match the format and layout of the agency's website and adds additional functionality, as desired.

The Web Access Module uses the standard D-FAST web services so that data is displayed live, and all communication is encrypted. Because of the complexity of the D-FAST database and calculations, NBS does not support direct access and/or calculations on the database outside of the client software.

Search Page





Summary/Payoff Quote Page
